

Boil Water Notice for City of Kyle
February 17, 2021
3:30pm

Due to repetitive and prolonged power outages at various water production sites, as well as an extended loss of one of the City's main water supplies, the City's water distribution system dropped below 20psi, and the City of Kyle is required by the Texas Commission on Environmental Quality to issue a system wide Boil Water Notice.

Though there is no evidence of any contamination within the City's water system, the city recommends that all water customers boil their water prior to consumption. This includes drinking, washing hands/face, brushing teeth, etc.

To ensure destruction of all harmful bacteria and other microbes, water for drinking, cooking and making ice can be boiled and cooled prior to consumption. The water should be brought to a vigorous rolling boil and then boiled for two minutes.

In lieu of boiling, individuals may purchase bottled water or obtain water from some other suitable source.

When it is no longer necessary to boil the water, the public water system officials will alert customers that the water is safe for drinking in a similar manner.
